Document 1: JP 10-271573 A (Sony Corp.), 9 October 1998

Document 2: JP 2001-217846 A (Toshiba Corp.), 10 August

2001

Claims 1-20

Document 1 (paragraphs [0031]-[0039]; fig. 1-4) discloses providing a remote control that receives an ID code from a TV receiver and assesses whether the ID code received is the same as the ID code received earlier and the feature wherein said TV receiver is provided with an IR light-emitting unit for transmitting the ID code of the device to said remote control.

Document 2 (paragraphs [0104]-[0148]; fig. 16) discloses a system that encrypts and then transmits and receives images and sound, wherein a TV receiver remote control receives a first VTR public key from a first VTR and transmits said first VTR public key to a second VTR.

However, an encrypted code management system comprising a plurality of data processing devices that send and receive data encrypted using a specific encryption code, wherein said system is provided with an electronic device constituted by a code management control unit that compares received encryption code and a

result output unit that outputs the comparison results to the code management control unit is neither disclosed nor suggested in document 1 or 2.

Claim 21-25

An encryption code management system provided with an electronic device comprising a code data management unit that transmits encryption code comparison data in the management control unit to a data processing device and with a data processing device comprising a code management receiving unit that receives comparison data from said electronic device and a result output unit that outputs comparison results received by said code management receiving unit is neither disclosed nor suggested in documents 1 and 2.

Claims 26-39

An encryption code management system provided with an electronic device comprising a code storage unit for storing one or multiple code(s) received by the code receiving unit and a code management transmission unit that transmits said encryption code stored in said code storage unit to a data processing device and with a data processing device comprising a code management receiving unit for receiving comparison results from said electronic device, a management control unit for comparing the encryption code received by the code management receiving unit with the encryption code from the device, and a result output unit to output the results compared with the code management control unit is neither disclosed nor suggested in documents 1 and 2.
